

Math 14 — Precalculus — Spring 2005

Text: Sullivan/Sullivan (1999) *Precalculus: Graphing and Data Analysis*

Material Covered: This course is designed to acquaint you with numbers, algebraic expressions, and graphs of equations. You will learn how to solve equations and inequalities by using analytical, numerical, and graphing techniques. You will study about lines, parabolas, circles, ellipses, hyperbolas, and translation of axes. While studying functions and their graphs, you will learn about polynomial and rational functions, and inverse, exponential, and logarithmic functions. The study of trigonometry will emphasize the use of both right triangles and unit circles. You will learn how to derive trigonometric identities and will solve trigonometric equations by using analytical, numerical, and graphing techniques. The use of the computer and cooperative learning are integrated throughout the course. Class will meet in a computer laboratory once a week.

Suggested assignments: With the exception of the first lecture, assignments should be read before the day they are discussed by the instructor. Homework problems should be attempted immediately after the lecture. (This list may be supplemented if the instructor wishes.)
